

Home Weavers Admin Operating Guide

Use this guide when changing the Home Weavers storefront from the Admin area.

The admin is organized into separate pages: Dashboard, Branding, Homepage, Content Pages, Categories, Products, and Orders.

Click the admin navigation at the top to move between pages. Save each page after making edits.

Current mockup note: this admin stores data in this browser for local testing. For the live store, connect these controls to a database, secure login, checkout, and real order processing.

Dashboard

Shows store health at a glance.

Orders received: total checkout orders created in the demo checkout.

Site visits: total storefront page loads in this browser.

Business generated: total dollar value from demo orders.

Products, total stock, and on sale: summary of the current catalog.

Order conversion: orders divided by visits. This is demo data until connected to real analytics.

Branding Page

Brand name changes the text beside the logo in the storefront header.

Logo URL can point to an uploaded image or an online image URL.

Upload logo lets you choose a logo file from your computer for this local mockup.

Search placeholder changes the text inside the search bar.

Search words are global keywords that help guide what customers search for.

Promo bar changes the announcement message at the top of the website.

Homepage Page

Hero slides control the large rotating banner on the front page.

Each slide has eyebrow, title, text, image, button label, and button link.

Top banner controls the banner after category selection.

Second banner controls the banner after New Arrivals.

Use links like [bedding.html#shop](#), [sale.html#shop](#), [new-arrivals.html#shop](#), or a specific category page.

Content Pages

Controls homepage About text, About Us page hero, story copy, and embedded video.

For YouTube videos, use an embed URL such as https://www.youtube.com/embed/VIDEO_ID.

Keep page copy short and customer-friendly. Long paragraphs can make the page feel heavy on mobile.

Categories Page

Add, rename, delete, or update categories and subcategories.

Product dropdowns in the product editor use the categories and subcategories saved here.

The product catalog in admin is grouped by category and then subcategory so large catalogs stay manageable.

Deleting a category warns you how many products will be deleted from that category.

Deleting a subcategory warns you how many products will be deleted from that subcategory.

Use this page before adding many products so the product editor has the correct category list.

Products Page

Add product creates a new editable product record.

Edit changes product name, brand, category, subcategory, price, stock, sizes, colors, description, details, photos, and search words.

Delete removes the product from the storefront catalog.

Show on Sale page makes the product appear on sale.html and displays the Sale tag.

Best seller lets the product rank higher when customers sort by best sellers.

Additional photos appear in the quick look gallery. Add one image URL per line.

Search words help the product show up for customer searches, for example queen comforter, cotton quilt, bath towel.

Orders Page

Shows checkout orders created from the demo cart.

Each order includes customer email, delivery choice, product list, total, date, and status.

Change status to New, Processing, Shipped, or Cancelled.

Clear orders removes the local demo order list.

Image Size Requirements

Logo: square image, 1000 x 1000 px recommended. JPG or PNG. Keep the logo centered with padding so it does not crop.

Homepage hero slides: 2000 x 900 px recommended. Minimum 1600 x 720 px. Use wide lifestyle photos. Keep important product detail near the center.

Top and second banners: 1800 x 700 px recommended. Minimum 1400 x 540 px. Wide horizontal photos work best.

Category cards: 1200 x 900 px recommended. Use consistent 4:3 images so every category frame stays even.

Product main image: 1200 x 1200 px recommended. Minimum 900 x 900 px. Square product/lifestyle photos keep product cards aligned.

Product gallery images: 1200 x 1200 px recommended. Keep all images for one product the same ratio.

Social media strip: 1000 x 700 px recommended for each tile.

Avoid tiny, blurry, dark, or heavily cropped images. The website uses object-fit cover, so edges can crop inside fixed frames.

Daily Operating Checklist

1. Check Dashboard for orders, visits, and revenue.
2. Open Orders and update any order statuses.
3. Open Categories before adding new product groups or subcategory pages.
4. Open Products to add new arrivals, adjust stock, update pricing, or add Sale tags.
5. Open Homepage to refresh hero slides and banners for promotions.
6. Open Branding only when changing logo, promo bar, search placeholder, or global keywords.
7. Open Content Pages when updating About Us or the embedded brand video.
8. Refresh the storefront after saving to confirm the customer-facing page looks right.
